Introducing 802.11AX WiFi

Even Faster Speed & Higher Efficiency

802.11ax, also referred as Wi-Fi 6, was created to improve network efficiency and provide even faster network speed. Instead of letting network tasks compete each other for resources, 802.11ax WiFi focus on scheduling access to guarantee performance of each end device.

802.11ax

Raw Speed 40% Faster

Compatible with 802.11a/b/g/n/ac Wi-Fi standards

Blazing Fast Wireless Speed

802.11AX comes with 1024QAM and long OFDM Symbol that allow the router to transmit even more data. Compare with 256QAM that used in 802.11ac, raw speeds increased by 25%. GP844GVXR is able to deliver blazing speed up to 1800Mbps.

OFDMA uses your time and frequency more efficiently

OFDMA is a time and frequency efficient technology that supports simultaneous low data rate transmission from several users, while OFDM that used in 802.11ac can only support one user at given moment.

MU-MIMO that works for both uploads and downloads

MU-MIMO allows the router to communicate multiple end devices simultaneously instead of letting devices wait in line. Whereas 802.11ac MU-MIMO only works for downloads, 802.11ax MU-MIMO works with both uploads and downloads, making communication more efficient.

BSS Coloring

BBS Color marks frames from neighbor's networks, so that your router can ignore them and only focus on your network tasks. Which means your router became much more efficient by getting rid of extra works.

Dual-Core Processor for Faster Processing

The GP844GVXR router has built-in dual core processor. The two cores enable parallel processing and increase speeds when managing multiple instructions from your devices.
